📍 Caserta, Italy | 🗓 Jan 2003 | 📞 +39 3407277081 | ✉ sparno.samuele70@gmail.com | 🐙 [Github](#) | 🔗 [LinkedIn](#) | 🌐 [Portfolio](#)

EDUCATION

Master's Degree in Cybersecurity – University of Salerno

2025 – 2027 (Expected)

- **Key Courses:** Penetration Testing & Ethical Hacking, Secure Programming, Digital Forensics, Cryptography, IoT Security, Data Security, Quantum Technologies for Security

Salerno, Italy

Erasmus+ BIP – University of Nicosia (Cyprus)

June 2026

- One-week Erasmus at the University of Nicosia, where I worked in a group with students from different European universities on defining security requirements on real-world security projects, including threat modeling, risk assessment, and policy design.

Bachelor's Degree in Computer Science – University of Salerno

2021 – 2025

- **Key Courses:** Computer Networks, Cybersecurity, Foundations of Artificial Intelligence

Salerno, Italy

WORK EXPERIENCE

Internship - Network & Infrastructure Monitoring · System Management S.p.A.

Dec 2024 – Mar 2025

- Designed and implemented a network monitoring infrastructure using Nagios Core, supervising 3+ hosts and 5+ services, enabling centralized detection of faults and anomalies. [GitHub Repo](#)
- Configured automated alerting (Postfix) and tuned alert thresholds, reducing mean time to detect (MTTD) by 60% and false positives by 40%.
- Simulated 10+ real-world fault scenarios to validate detection coverage and improve system reliability.
- Tools: GNS3, FortiGate, VMware, Cisco Routers & Switches, Nagios Core, NSClient++, Postfix

PROJECTS

Secure IoT Camera Pipeline for Forensic Integrity Verification

[GitHub Repo](#)

- Built a secure-by-design IoT surveillance pipeline with motion-triggered capture, AES-encrypted transmission, and SHA-256 integrity verification
- Implemented device authentication via digital signatures, nonce-based replay protection, and anti-duplication hash checks, applying threat modeling against replay and tampering attacks.
- Notarized forensic evidence on the Ethereum blockchain via IPFS + Hyperledger FireFly for tamper-evident traceability.
- Technologies: Go, Python, Arduino/ESP32, MQTT, AES, SHA-256, IPFS, Hyperledger FireFly, Ethereum, Solidity, Node.js, REST APIs

Log Analyzer & Alert System – Mini SIEM (Detection Engineering)

[GitHub Repo](#)

- Built a lightweight SIEM in Python for log analysis and automated anomaly detection (e.g., SSH brute-force attempts), following detection-as-code principles.
- Implemented YAML-based detection rules, regex auth.log parsing, JSON alert generation, and SMTP notifications.
- Indexed events in Elasticsearch with an interactive Grafana dashboard; containerized with Docker.
- Technologies: Python, Elasticsearch, Grafana, Docker, YAML, SMTP, JSON

AWARDS

1st Place - Google Challenge Italy 2026

Google, 2026

- Won the national final of Google Challenge Italy 2026 (university, regional, and national stages); selected to represent Italy at the EMEA Leaders Series in London (June 2026).
- Project: GlaucoScan Kids – an AI-powered smartphone experience turning pediatric glaucoma screening into an interactive game for faster early diagnosis.

CERTIFICATIONS

Languages: Italian (Native), English (B2 – Upper-Intermediate)

HackTheBox Academy - SOC Analyst Path / CDSA Certification

In Progress

- Hands-on training in SIEM, security monitoring, threat hunting (Elastic), log investigation (Splunk), and incident handling.

Elements of AI - University of Helsinki & MinnaLearn

2021

- Fundamentals of Machine Learning and Neural Networks, Future Implications of Artificial Intelligence

[Online](#)

TECHNICAL SKILLS

Programming: Python, Go, C/C++, Java, JavaScript, SQL, Solidity

Security Engineering: Secure-by-Design Development, Applied Cryptography (AES, SHA-256, digital signatures), Network Security, Integrity Verification

Detection & Response: SIEM (Elastic, Splunk), Security Monitoring, Threat Hunting, Log Analysis, Incident Handling, Digital Forensics, Network Traffic Analysis - *Tools:* Wireshark, Nmap, Kali Linux

Infrastructure & OS: Docker, Git, Azure (basic), GNS3, FortiGate, VMware, Cisco, Nagios Core, Grafana, Postfix – Linux, Windows
