

Samuele Sparno

📍 Caserta, Italy | 🎂 15/01/2003 | 📞 +39 3407277081 | ✉️ sparno.samuele70@gmail.com | 🐙 [Github](#) | 🔗 [Linkedin](#)

EDUCATION

Master's Degree in Cybersecurity – University of Salerno

Salerno, Italy

- **Key Courses:** Penetration Testing & Ethical Hacking, Secure Programming, Digital Forensics, Cryptography, IoT Security, Data Security, Quantum Technologies for Security

2025 – Present (Expected 2027)

Bachelor's Degree in Computer Science – University of Salerno

Salerno, Italy

- **Key Courses:** Computer Networks, Cybersecurity, Foundations of Artificial Intelligence

2021 – 2025

WORK EXPERIENCE

Internship - Network & Infrastructure Monitoring · System Management S.p.A.

12/2024 – 03/2025

- Designed and implemented a network monitoring infrastructure using Nagios Core, supervising 3+ hosts and 5+ services. Configured automated alerting via Postfix, reducing mean time to detect issues by 60%. Simulated 10+ real-world fault scenarios to improve system reliability. Optimized alert thresholds, reducing false positives by 40%. Technologies: GNS3, FortiGate, VMware, Cisco Routers & Switches, Nagios Core, NSClient++, Postfix

[Github Repo](#)

PROJECTS

Secure IoT Camera Pipeline for Forensic Integrity Verification

[Github Repo](#)

- Built a secure-by-design IoT surveillance pipeline with motion-triggered capture, AES-encrypted transmission, and SHA-256 integrity verification
- Implemented device authentication via digital signatures, nonce-based replay protection, and anti-duplication hash checks
- Notarized forensic evidence on Ethereum blockchain via IPFS + Hyperledger FireFly, ensuring tamper-evident traceability
- Technologies: Go, Python, Arduino/ESP32, MQTT, AES, SHA-256, IPFS, Hyperledger FireFly, Ethereum, Solidity, Node.js, REST APIs

Log Analyzer & Alert System - Mini SIEM

[Github Repo](#)

- Built a lightweight personal SIEM in Python for system log analysis and automated anomaly detection (e.g., SSH brute-force attempts)
- Implemented YAML-based detection rules, regex auth.log parsing, JSON alert generation, and automated email notifications via SMTP
- Indexed events in Elasticsearch with interactive Grafana dashboard; containerized with Docker
- Technologies: Python, Elasticsearch, Grafana, Docker, YAML, SMTP, JSON

TalkAID - AI-Powered Web Platform for Remote Speech Therapy

[Github Repo](#)

- Contributed to a web platform for remote speech therapy in a structured team with role-based task division
- Integrated Azure AI for voice evaluation and exercise recommendations
- Technologies: HTML, CSS, JavaScript, Java, SQL, Azure AI, Git

AWARDS

1st Place - Google Challenge Italy 2026

Google, 2026

- Won university, regional (Campania), and national stages of Google Challenge Italy 2026, competing against teams from universities across Italy. Selected to represent Italy at the EMEA Leaders Series in London (June 2026). Project: "GlaucoScan Kids" an AI-powered smartphone experience transforming pediatric glaucoma screening into an interactive game, enabling faster early diagnosis for children and families.

CERTIFICATIONS

Languages: Italian (Native), English (B2 – Upper-Intermediate)

HackTheBox Academy - SOC Analyst Path / CDSA Certification

In Progress

- **Completed:** Security Monitoring & SIEM Fundamentals, Windows Event Logs & Finding Evil, Threat Hunting with Elastic Log Sources Investigation with Splunk, Incident Handling Process

Elements of AI - University of Helsinki & MinnaLearn

[Online](#)

- Fundamentals of Machine Learning and Neural Networks, Future Implications of Artificial Intelligence

2021

TECHNICAL SKILLS

Programming Languages: Python, Go, C/C++, Java, JavaScript, SQL, Solidity

Cybersecurity: Network Security, Digital Forensics, Cryptography, Threat Hunting, Incident Handling & Response, SIEM, Security Monitoring, Log Analysis, Windows Event Log Analysis, Network Traffic Analysis, Integrity Verification

Security Tools: Wireshark, Nmap, Kali Linux, Elastic Stack, Splunk

Infrastructure & Networking: GNS3, FortiGate, VMware, Cisco Routers & Switches, Nagios Core, NSClient++, Grafana, Postfix, Docker, Git

Operating Systems: Linux, Windows
